BBK

Our "**Bargain Basement Kiosk**". A little crude, we know, but that's what the **BBK** really stands for. It's been engineered for simplicity, versatility and to be cost competitive.

Generally used in back of house operations such as HR and staff management, the **BBK** has been designed to be maintained by your own IT staff. The size and straight angles allow it to be house large peripherals such as A4 printers, Uninterruptible power supplies (UPS) and card dispensers. A modular sliding shelf allows easy access to the peripherals without having to dig around under the hood, perfect for OH&S regulations.
