Stereo speakers	Additional colour / branding options	
X3 height options		

FLEX

A unique adjustable kiosk. As the name suggests, the screen can be set to almost any height or angle. The Flex is designed to exceed any disabled access requirements.

We designed the Flex after a request from a the University of Technology Sydney requested we go above and beyond disabled access requirements and created a solution that has been used in a variety of situations from government offices to galleries to automotive showrooms where a series of Flex's can be setup at different heights and angles to suit.

The Flex is another recipient of the coveted Australian Design Awards for excellence in design.
